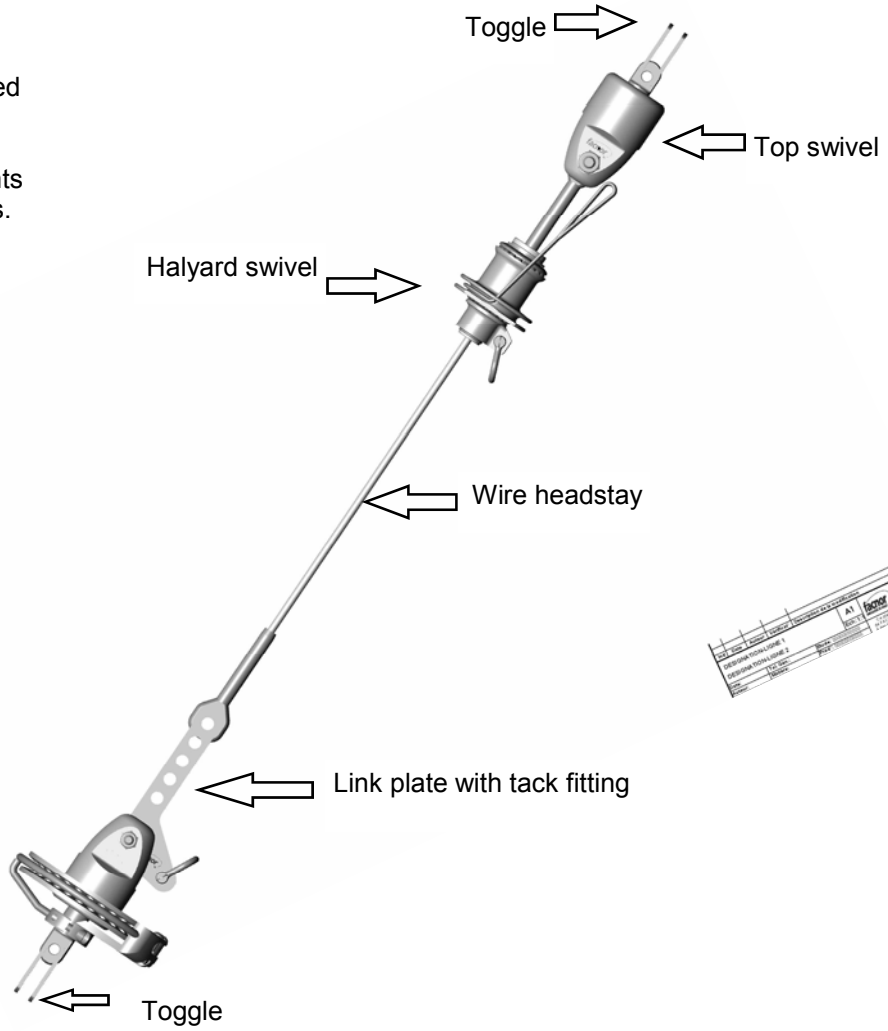
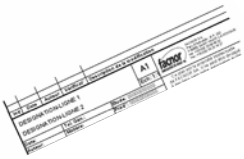
FACNOR WIRE HEADSTAY FURLING SYSTEM FOR BOATS 19' TO 28'

The Facnor wire furling system is designed to furl jibs without the weight and awkwardness of aluminum or PVC foils. This system is ideal for trailerables and sport boats because it does not use foils which are heavy and difficult to manage while raising and lowering the mast. The jib furls onto the headstay and can be raised and lowered on the halyard swivel.

The continuous line furling drum is machined from a single block of aluminum. The low profile design allows for maximum jib luff length and greater turning power. It prevents drum overrides is light than standard drums.

FURLING DURM





FEATURES:

- Continuous line furling drum
- 5 or 6 mm wire headstay (Max)
- Greater turning power
- Longest jib luff length
- Easy to raise and lower the mast
- 40% lighter than standard jib furlers
- Sealed waterproof bearings
- Sleek design
- Easy to install
- Fully tested in all conditions
